

Front End Loading Shovel

Suitable For:

Anyone responsible for the loading of front end shovels

Aims And Objectives:

To enable each candidate to gain the necessary theoretical and practical skills associated with the use of front end loading shovels

Course Content :

- Current Health & Safety legislation and current Regulations
- Precautions to be taken for safe “on site” machine operation including related attachments and the limits and abilities applicable.
- Typical “in company” machine operations.
- Daily inspection and maintenance tasks to the machine.
- Travel the machine on level and uneven ground and on gradients both loaded and empty in both forward and reverse directions.
- Machine limitations and factors affecting stability.
- Operating the machine safely and correctly to perform excavating stockpiling, vehicle and hopper loading tasks as applicable, whilst maintaining full control at all times.
- How to backfill an open excavation and to level off the surface area.
- How to load and unload the machine from a transporter if applicable
- How to return the machine to a safe “out of use” situation.
